Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over
Bridgestone Tire (JP 60-222071 A).

Regarding claim 1, Bridgestone Tire discloses a spherical luminescent ball comprising an outer layer **22** of a translucent polymer material allow for the diffusion of light, a substantially spherical inner chamber made by the inner diameter of the outer layer, containing a first component and a second component that, when combined, form a chemiluminescent liquid mixture, a partitioning element separating said first and second component wherein when the partitioning component ruptures with sufficient external force, the first and second component combined to form the chemiluminescent liquid mixture. Bridgestone Tire also notes in Figures 2a-2c different ball configuration that can be employed and in Figure 3, different variations in which the chemiluminescent chamber can be affixed inside of the cover. One having ordinary skill in the art would have found it obvious to have any number of layers within the ball so long as the light is emitted through the outer cover. Also the weight of the ball would

inherent be evenly distributed as based on Figures 3a-3g based on the symmetry of the inner core and chemilunimescent material.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
